Water-Lubricated Rubber Lined Bearings for Industrial Applications

Complete range of standard water-lubricated rubber lined bearings. Manufacture of bearings to non-standard dimensions as well as with special materials for the pump and turbine industries. Design, engineering, molding and machining at one facility.

- Precision Machining to suit customer requirements.
- Shell materials for every application: Naval Brass, Stainless Steel, Bronze Alloys, Aluminum, Titanium, Non-Metallic.

- Custom engineered to meet customer requirements or made to customer specifications.
- Fully equipped facility provides capability to produce even the largest bearings.

Typical Applications -

Aerators – Agitators – Thickeners – Repulpers – Sludge Handling – Classifiers – Washers – Strainers – Dredges – Vertical Turbine Pumps – Sump Pumps – Horizontal Pumps – Drainage Pumps – Irrigation Pumps – Hydro Turbines
